RE: North Storm Sewer and Box Culvert By-pass Work Plan
Riverview Innovation & Technology Campus, Inc.
Brownfield Cleanup Program Site No. C915353
Town of Tonawanda, New York

Background and Objective

The primary sources of water to the settling ponds and Outfall #001 come from the North Storm Sewer and the Box Culvert. On behalf of Riverview Innovation & Technology Campus (RITC), Inventum Engineering has collected samples along the utilities and has consistently detected cyanide, mercury, and ammonia above the Storm Water Pollution Prevention Plan (SWPPP) action levels (Figure 1). Although the action levels do not apply at these locations, the fact that these constituents are detected in the North Sewer and Box Culvert suggests there may be groundwater infiltration along the length of the conduits.

Rather than potentially provide a conduit to the settling ponds, RITC would like to remove sections of the North Sewer and Box Culvert (Figure 2) to (1) reduce the collection and discharge of groundwater to the Mansion Sump and Settling Ponds, (2) provide an alternate surface water system to maintain surface water management on the BCP Site and (3) allow the groundwater in the vicinity of the former surface water conduits to flow to the Groundwater Interim Remedial Measures (IRM) collection systems. The actions proposed in this work plan are intended to reduce the loading of ammonia, cyanide and mercury to the settling ponds and Outfall #001.

Scope of Work

As described above, the intent is to eliminate the direct pathway between shallow groundwater north and south of the former production area to the Mansion Sump, Settling Ponds and Outfall #001 and redirect that water to the groundwater collection systems, the groundwater treatment plant and the sewer system, ultimately the Publicly Owned Treatment Works (POTW) by eliminating the seepage into the North Storm Sewer and the Box Culvert. The actions proposed to achieve the objectives include:

- Excavation and crushing of the concrete box culvert from the east end of the battery to the east end of the fusion bonded pipe encased in flowable fill. The box culvert concrete will be crushed and stockpiled for later use.
- Removal of all laterals that previously discharged to the box culvert.
- Installation of a rock check dam east (Figure 3) of the fusion bonded pipe.

- Backfill the culvert cavity with fill from the adjacent areas.
- Creation of a swale which will convey surface water to the check dam and pipe.
- The invert of the swale shall be no more than two feet below the surrounding ground surface to ensure it does not collect groundwater.
- Excavation and removal of the North Storm Sewer to the catch basin west of the former green warehouse location. The end of the remaining storm sewer will be protected with a screen and check dam.
- Construction of a check dam east of the remaining section of the North Sewer.
- Grading adjacent fill to create a swale above the elevation of the shallow groundwater. Using fill from the vicinity ensures the surface water is collecting over materials of similar characteristics.
- The invert of the swale shall be no more than two feet below the surrounding ground surface to ensure it does not collect groundwater.

Stormwater Management

Prior to any pipe or culvert excavation, the east end of the pipe and culvert to remain will be exposed and protected with a check dam, a combination of tested clean cobble size concrete and a metal screen (Figure 3). The check dams shall be inspected throughout the excavation program to ensure they are restricting sediment and not being overtopped by excess flow.

Excavation and Removal

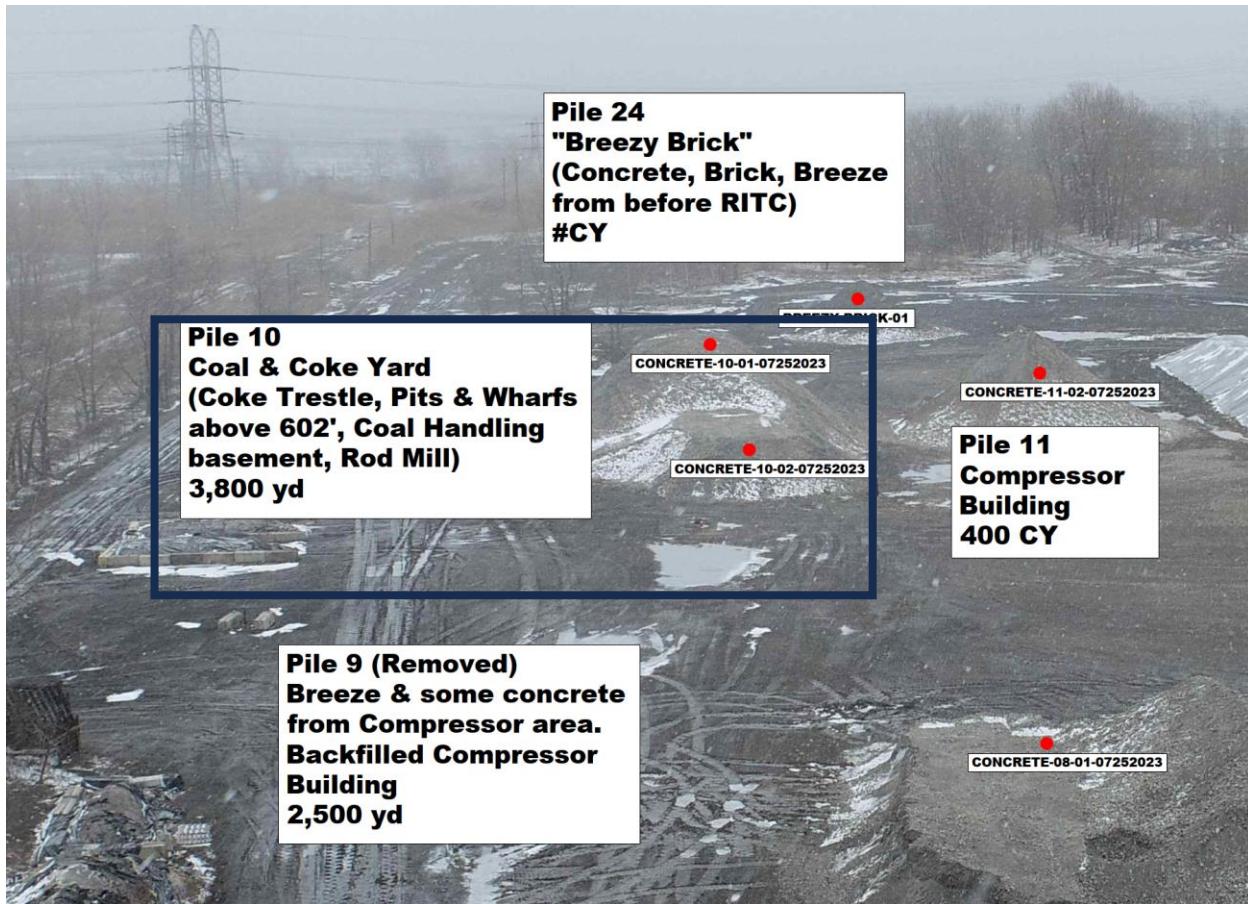

The excavation and removal of the North Storm Sewer and Box Culvert accomplishes two primary objectives of the work plan; removes the direct conduit between process area groundwater and the Mansion Sump and allows observation and removal of laterals and grossly impacted materials along the flow path. The robotic inspection and jetting of the north sewer showed that there were residuals that could not be removed remotely. Recent excavations along the North Sewer encountered areas of pipe that were compromised and had holes and faults that were too small to be observed by the camera, but large enough to allow groundwater infiltration. The cleaning of the Box Culvert showed there were more than seventy (70) pipes that were discharging to the box culvert. The fusion bonded pipe and flowable fill eliminated infiltration along the most impacted areas south of the MW-BCP-5 area and the Light Oil Area. However, the pipes in the areas east of the former Battery No. 1 could only be sealed with hydraulic cement as the battery and production equipment still surrounded the culvert and the laterals discharge piping remained in the ground.

The Community Air Monitoring Program (CAMP, Inventum, 2021) will be followed during all intrusive activities.

The North Storm Sewer will be excavated and either disposed or recycled. The fill over the pipe will be excavated and staged along the pipe alignment. If there is no mobile tar or Non-aqueous Phase Liquid (NAPL) observed, the material will be used as backfill in the trench. The pipe will be removed and inspected, if free of residuals, the pipe will be recycled. If there are residual materials that cannot be removed by mechanical means or power washing, the pipe will be staged on polyethylene sheeting, the contents will be sampled for disposal parameters, and the pipe will be disposed in accordance with the characteristics of the residual. The sidewalls of the excavation will be inspected prior to backfill. All lateral piping adjacent to the excavation will be removed using the same procedure as the North Storm Sewer.

After inspection of the trench walls, the excavation will be backfilled with the suitable fill from the excavation. The materials shall be placed and compacted to ensure they do not consolidate and create a traffic hazard. Fill to bring the pipe alignment to grade will come from the clean crushed concrete stockpile No. 10 in the east end of the process area (Appendix A):

The Box Culvert will be excavated and the box culvert concrete will be crushed and be placed in a new pile so it can be reused. The fill and plates over the Box Culvert will be excavated and staged along the culvert alignment. The plates and crane mats will be reused, recycled, or disposed offsite. The concrete will be removed and inspected, if free of residuals, the concrete will be staged for processing and reuse. If there are residual materials that cannot be removed by mechanical means or power washing, the concrete will be staged on polyethylene sheeting, the contents will be sampled for disposal parameters, and the concrete will be disposed in accordance with the characteristics of the residual. The sidewalls of the excavation will be inspected prior to backfill. All lateral piping adjacent to the excavation will be removed using the same procedure as the North Storm Sewer.

After inspection of the trench walls, the excavation will be backfilled with the crushed concrete from Pile No. 10 (Appendix A). The materials shall be placed and compacted to ensure they do not consolidate and create a traffic hazard.

Swale Grading

The swales (Figure 3) will be graded to drain to one of two check dams (Figure 3) installed to ensure excess sediment does not enter the stormwater system. The swales will be graded into the compacted fill at an elevation that will convey surface water to the check dam discharge points without excavation into the underlying shallow groundwater system. The grading around and the swale over the North Storm Sewer location shall be at elevations that allow positive drainage from the north, maintaining control of surface water on the BCP Site. The swale will have a split to provide two outlets for the eastern sourced flows, one across the space between the solidified Tar Management and exhauster building areas (Not over solidified materials, and one to the remaining section of the north storm sewer.

Where the swales cross traffic lanes, a wet crossing of cobble size concrete over a layer of geotextile, or two, 8-inch diameter, or larger pipes shall be buried as conduits under the traffic lane.

Survey Data

The locations and elevations of the inverts of the North Storm Sewer and Box Culvert shall be measured with the Global Positioning System (GPS) prior to removal. If possible, not less than six (6) location and elevation measurements shall be made along each system. The invert of the North Sewer, if not accessible, shall be estimated by measurements of the base of the excavation. The locations and elevations of all laterals, mobile tar, or NAPL shall be measured with the GPS. Locations of the laterals to the Box Culvert shall be correlated with the previous observations and GPS data.

The GPS data shall be tabulated and presented on a project plan.

Green and Sustainable Remediation

In accordance with DER-31 this work plan has considered the sustainable remediation initiatives and complies by:

- Protecting surface water quality at Outfall #001 using passive, energy free water conveyance,
- Utilizing onsite materials to the extent possible,
- Reusing and recycling materials to the extent possible, and
- Eliminating potential sources quickly and efficiently.

Reporting

The New York State Department of Environmental Conservation (NYSDEC) will be provided no less than 2 days' notice prior to the initiation of the excavations and no less than 5 days' notice prior to the shipment of any recycled or waste from the BCP Site.

Following removal of the North Storm Sewer and Box Culvert, a letter construction completion report will be prepared to describe the activities both in text and with photographs. The management and disposition of all materials, pipe, fill, and concrete will be described and any bills of lading or waste manifests will be appended. The GPS data will be presented in tabular and graphic formats.

Schedule

This would begin within one week of the approval of a work plan. The work will require approximately one month to complete apart from sample turnaround and waste profile approvals which may take up to 30- to 90-days.

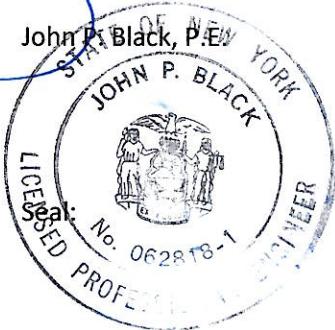

Engineering Certification

I, John. P. Black, certify that I am currently a NYS registered professional engineer as defined in 6 NYCRR Part 375 and that this North Storm Sewer and Box Culvert By-pass Work Plan was prepared in accordance with all applicable statutes and regulators and in substation conformance with the DER Technical Guidance for Site Investigation and Remediation (DER-10) and Green Remediation (DER-31).

Respectfully Submitted,

Inventum Engineering, P.C.

Appendix A – Import Request

NEW YORK STATE
DEPARTMENT OF ENVIRONMENTAL CONSERVATION

Request to Import/Reuse Fill or Soil

This form is based on the information required by DER-10, Section 5.4(e) and 6NYCRR Part 360.13. Use of this form is not a substitute for reading the applicable regulations and Technical Guidance document.

SECTION 1 – SITE BACKGROUND

The allowable site use is:

Have Ecological Resources been identified?

Is this soil originating from the site?

How many cubic yards of soil will be imported/reused?

If greater than 1000 cubic yards will be imported, enter volume to be imported:

SECTION 2 – MATERIAL OTHER THAN SOIL

Is the material to be imported gravel, rock or stone?

Does it contain less than 10%, by weight, material that passes a size 100 sieve?

Is this virgin material from a permitted mine or quarry?

Is this material recycled concrete or brick from a DEC registered processing facility?

SECTION 3 - SAMPLING

Provide a brief description of the number and type of samples collected in the space below:

Two discrete VOCs (8260) samples were collected along with 2 composite samples for SVOCs (8270), and inorganics.

Example Text: 5 discrete samples were collected and analyzed for VOCs. 2 composite samples were collected and analyzed for SVOCs, Inorganics & PCBs/Pesticides.

If the material meets requirements of DER-10 section 5.4(e)5 (other material), no chemical testing needed.

SECTION 3 CONT'D - SAMPLING

Provide a brief written summary of the sampling results or attach evaluation tables (compare to DER-10, Appendix 5):

Sample results are attached.

Example Text: Arsenic was detected up to 17 ppm in 1 (of 5) samples; the allowable level is 16 ppm.

If Ecological Resources have been identified use the "If Ecological Resources are Present" column in Appendix 5.

SECTION 4 – SOURCE OF FILL

Name of person providing fill and relationship to the source:

RITC (owner)

Location where fill was obtained:

3875 River Road, Tonawanda New York. Recovered brick and breeze.

Identification of any state or local approvals as a fill source:

NA

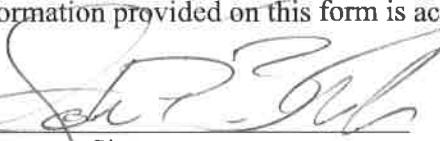

If no approvals are available, provide a brief history of the use of the property that is the fill source:

The property was historically a Coke Plant. The material to be used for back fill of North Storm Sewer and Box Culvert. The material is crushed concrete from approved non-BCP structures, Coke Yard trestle foundations, Rod Mill building, Coal Handling basement (pile 10).

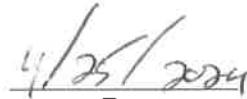

Provide a list of supporting documentation included with this request:

Pile 10 Concrete Evaluation Table, concrete pile figure & Laboratory report.

The information provided on this form is accurate and complete.

Lab Number: L2342825
Report Date: 08/17/23

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Number: CONCRETE SAMPLING

Lab Number: L2342825
Report Date: 08/17/23

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L2342825-01 through -06: Any reported concentrations that are below 200 ug/kg may be biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

Semivolatile Organics

The WG1810297-2/-3 LCS/LCSD recoveries, associated with L2342825-01, -01D, -02, -03, -04D, -04, -05, and -06, are below the acceptance criteria for benzoic acid (0%/0%); however, it has been identified as a "difficult" analyte. The results of the associated samples are reported.

Total Metals

L2342825-01 through -06: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by the sample matrix.

The WG1810373-1 Method Blank, associated with L2342825-01 through -06, has a concentration above the reporting limit for iron and nickel. Since the associated sample concentrations are either greater than 10x the blank concentration or non-detect to the RL for this target analyte, no corrective action is required. Any results detected below the reporting limit are qualified with a "B".

The WG1815441-3 MS recoveries, performed on L2342825-01, are outside the acceptance criteria for chromium (127%) and nickel (164%). A post digestion spike was performed and was within acceptance criteria.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
	Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name: RITC
Project Number: CONCRETE SAMPLING

Lab Number: L2342825
Report Date: 08/17/23

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively

Report Format: DU Report with 'J' Qualifiers

Project Name: RITC
Project Number: CONCRETE SAMPLING

Lab Number: L2342825
Report Date: 08/17/23

Data Qualifiers

Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624.1: m/p-xylene, o-xylene, Naphthalene

EPA 625.1: alpha-Terpineol

EPA 8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; EPA 353.2: Nitrate-N, Nitrite-N; SM4500NO3-F: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**

EPA 524.2: THMs and VOCs; EPA 504.1: EDB, DBCP.

Microbiology: SM9215B; SM9223-P/A, SM9223B-Colilert-QT, SM9222D.

Non-Potable Water

SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH: Ammonia-N and Kjeldahl-N, **EPA 350.1: Ammonia-N, LACHAT 10-107-06-1-B: Ammonia-N, EPA 351.1, SM4500NO3-F, EPA 353.2: Nitrate-N, SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D, EPA 300: Chloride, Sulfate, Nitrate.**

EPA 624.1: Volatile Halocarbons & Aromatics,

EPA 608.3: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

EPA 625.1: SVOC (Acid/Base/Neutral Extractables).

Microbiology: SM9223B-Colilert-QT; Enterolert-QT, SM9221E, EPA 1600, EPA 1603, SM9222D.

Mansfield Facility:

Drinking Water

EPA 200.7: Al, Ba, Cd, Cr, Cu, Fe, Mn, Ni, Na, Ag, Ca, Zn. **EPA 200.8: Al, Sb, As, Ba, Be, Cd, Cr, Cu, Pb, Mn, Ni, Se, Ag, TL, Zn. EPA 245.1 Hg. EPA 522, EPA 537.1.**

Non-Potable Water

EPA 200.7: Al, Sb, As, Be, Cd, Ca, Cr, Co, Cu, Fe, Pb, Mg, Mn, Mo, Ni, K, Se, Ag, Na, Sr, TL, Ti, V, Zn.

EPA 200.8: Al, Sb, As, Be, Cd, Cr, Cu, Fe, Pb, Mn, Ni, K, Se, Ag, Na, TL, Zn.

EPA 245.1 Hg.
